CONTENTS

I. **Theoretical Foundations** 1
by P. Grigolini

II. **Basic Description of the Rules Leading to the Adiabatic Elimination of Fast Variables** 29
by P. Grigolini and F. Marchesoni

III. **Continued Fractions in the Theory of Relaxation** 81
by G. Grosso and G. Pastori Parravicini

IV. **Memory Function Methods in Solid State Physics** 133
by G. Grosso and G. Pastori Parravicini

V. **Molecular Dynamics: Intense External Fields** 183
by M. W. Evans

VI. **Nonlinear Effects in Molecular Dynamics of the Liquid State** 225
by M. Ferrario, P. Grigolini, A. Tani, R. Vallauri, and B. Zambon

VII. **Dynamical Properties of Hydrogen-Bonded Liquids** 277
by D. Bertolini, M. Cassettari, M. Ferrario, P. Grigolini, and G. Salvetti

VIII. **Slow Motion EPR Spectra in Terms of a Generalized Langevin Equation** 321
by M. Giordano, P. Grigolini, D. Leporini, and P. Marin

IX. **The Theory of Chemical Reaction Rates** 389
by T. Fonseca, J. A. N. F. Gomes, P. Grigolini, and F. Marchesoni

X. **Experimental Investigation on the Effect of Multiplicative Noise by Means of Electric Circuits** 445
by S. Faetti, C. Festa, L. Fronzoni, and P. Grigolini

XI. **Interdisciplinary Subjects (Population Genetics): The Time Properties of a Model of Random Fluctuating Selection** 477
by P. Grigolini, F. Marchesoni, and S. Presciuttini

XII. **Stochastic Processes in Astrophysics: Stellar Formation and Galactic Evolution** 493
by F. Ferrini, F. Marchesoni, and S. N. Shore
